PRESS RELEASE

REDL Technologies presents the future of digital dispensing at drinktec 2025.

REDL Technologies will be presenting the entire SILEXA ecosystem in full operation at drinktec 2025. Visitors can expect a live experience that combines smart self-service terminals, modular dispensing columns and state-of-the-art cloud services into a comprehensive digital solution – hands-on, interactive and with measurable added value for operators.

Five innovations that redefine the bar

- **SILEXA Self Serve Hub „Scan & Pour“** – SILEXA Self Serve Hub turns any soft drink dispenser into a smart self-service point: pay, scan the QR code, tap the drinks – automatically limited, no shrinkage, pays for itself immediately. Real-time consumption data and empty notifications included – plug & play.
- **SILEXA App Connect** – Brings your favourite apps directly to the tap touchscreen: ordering, payment or even music and lighting control run natively on the bar.
- **SILEXA Tower with „Move“-Extension** – SILEXA Move Add-On makes the dispensing station fully automatic: whether beer or soft drinks, just place your cup, push – done. Ideal for rush hour bars and self-service areas, it reduces staff workload and increases throughput.
- **SILEXA Multi Post-Mix Spout** – SILEXA Spout is an ultra-compact 9-way soft drink dispenser with a rinsing adapter: flow-optimised for perfect CO₂ carbonation for up to 9 refreshing soft drinks and juices – in the Spout Pure version for freely adjustable CO₂ content – still, mildly sparkling or strongly sparkling water at the touch of a button.

- **SILEXA Cloud Services** – Centralised fill level, remote updates and open APIs. AI heat maps compare sales hotspots across all branches. State-of-the-art cloud technology 'Made in Austria', securely scalable to thousands of dispensing points.
- REDL Technologies is also presenting **KEG Switcher**, the **Growler Filler** and the **Cocktail machine** – solutions that round off the portfolio for professional beverage dispensing.

Efficiency, transparency, experience

With the SILEXA ecosystem, **REDL Technologies** focuses on digital networking, precise control and maximum operational reliability. The aim is to make serving processes faster, more sustainable and more profitable – without compromising the guest experience.

Live at drinktec 2025

Trade visitors are invited to experience SILEXA solutions live at stand **C4-402** and see for themselves how powerful and simple the systems are.
